

GeofabricsGolf

Summer 2009 Newsletter

Geofabrics, well known for BunkerMat® & Megaflo® What else do we do?

Jutemat (Thickmat)

Used to suppress weeds and promote growth of planted vegetation while preventing erosion occurring.

Jutemat (Finemat)

A grass establishment mat protecting top soil from wind and water erosion while promoting a moist micro-climate for seed germination.

Gabions

Form permanent, engineered solutions to the problems of erosion stability and the forces of nature. Gabions are not only robust and durable, but when filled with a locally available rock, natural rock wall finish can be achieved. Impressive entrances and feature walls can be achieved to enhance the look of any golf course.

Grassroots™

Synthetic turf reinforcement mat which protects underlying soil from erosion and provides a long term reinforcing matrix for vegetative growth.

- Embankments – Grassroots™ covers the slope and is seeded
- Channels – Grassroots lines the channel to protect the underlying soil
- Landscaping – Grassroots is installed to provide enhanced aesthetics

ElcoSEAL®

Geosynthetic Clay Liner which is manufactured in Australia. ElcoSEAL® provides exceptional liquid containment in reservoirs, ponds, lagoons and irrigation channels. Its Bentonite core swells thus ensuring small damage points are self healing. ElcoSEAL does not require specialist installation labour.

bidim®

is used as a separating fabric to stop the migration of sub soil fines at the bunker base from passing through to the clean sand bidim® is a continuous filament nonwoven needle punched geotextile engineered to ensure high strength and flow characteristics

Welcome

Geofabrics Golf has made a name for its locally made products, specifically Megaflo and BunkerMat. Apart from the golf sector, Geofabrics

covers a varied range of industry sectors including civil, erosion control and mining. From these other sectors we have on hand a range of products that can be used to solve many situations in golf courses. The majority of these products are made by Geofabrics either in our Albury or Gold Coast operations. Our branches are available to advise on the use of any of our products in golf course applications.

I hope everyone had a safe Christmas and are enjoying the New Year.

Neil Taylor
Business Development Manager - Golf

wishing
you all a
happy
new year

3 easy steps

to eliminate worn & muddy areas

1

2

3

- Allows grass to grow up through
- UV stabilized high density polyethylene mesh
- Provides grip to vehicles
- Two grades available (1.2kg & 2.0kg per m²)
- Comes in rolls so easy to install

BunkerMat® now also available through

Bunkermat®

Geofabrics BunkerMat® product continues prove its reliability and performance throughout Australia and other extreme conditions around the world.

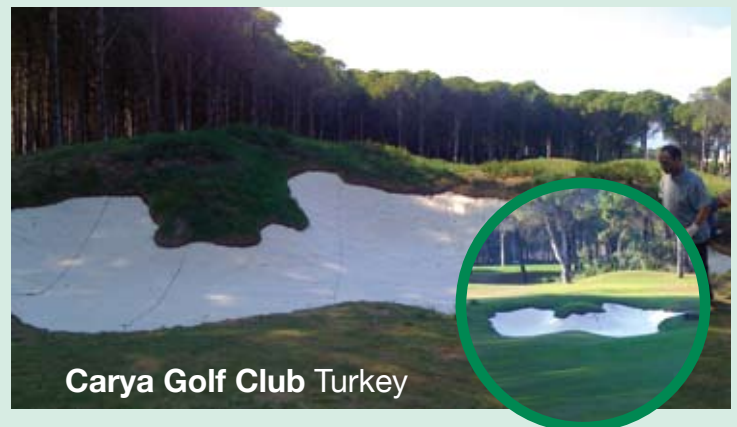

BunkerMat®s tight knit UV stabilised fibres ensures a first quality bunker liner.
